

Pump & Drainage Specialists
covering London and the South East

DMS MECHANICAL COMPANY OVERVIEW

Pump & Drainage
Specialists

Commercial &
Domestic Clients

Experienced
engineers

Responsive
& discreet

London
& South East

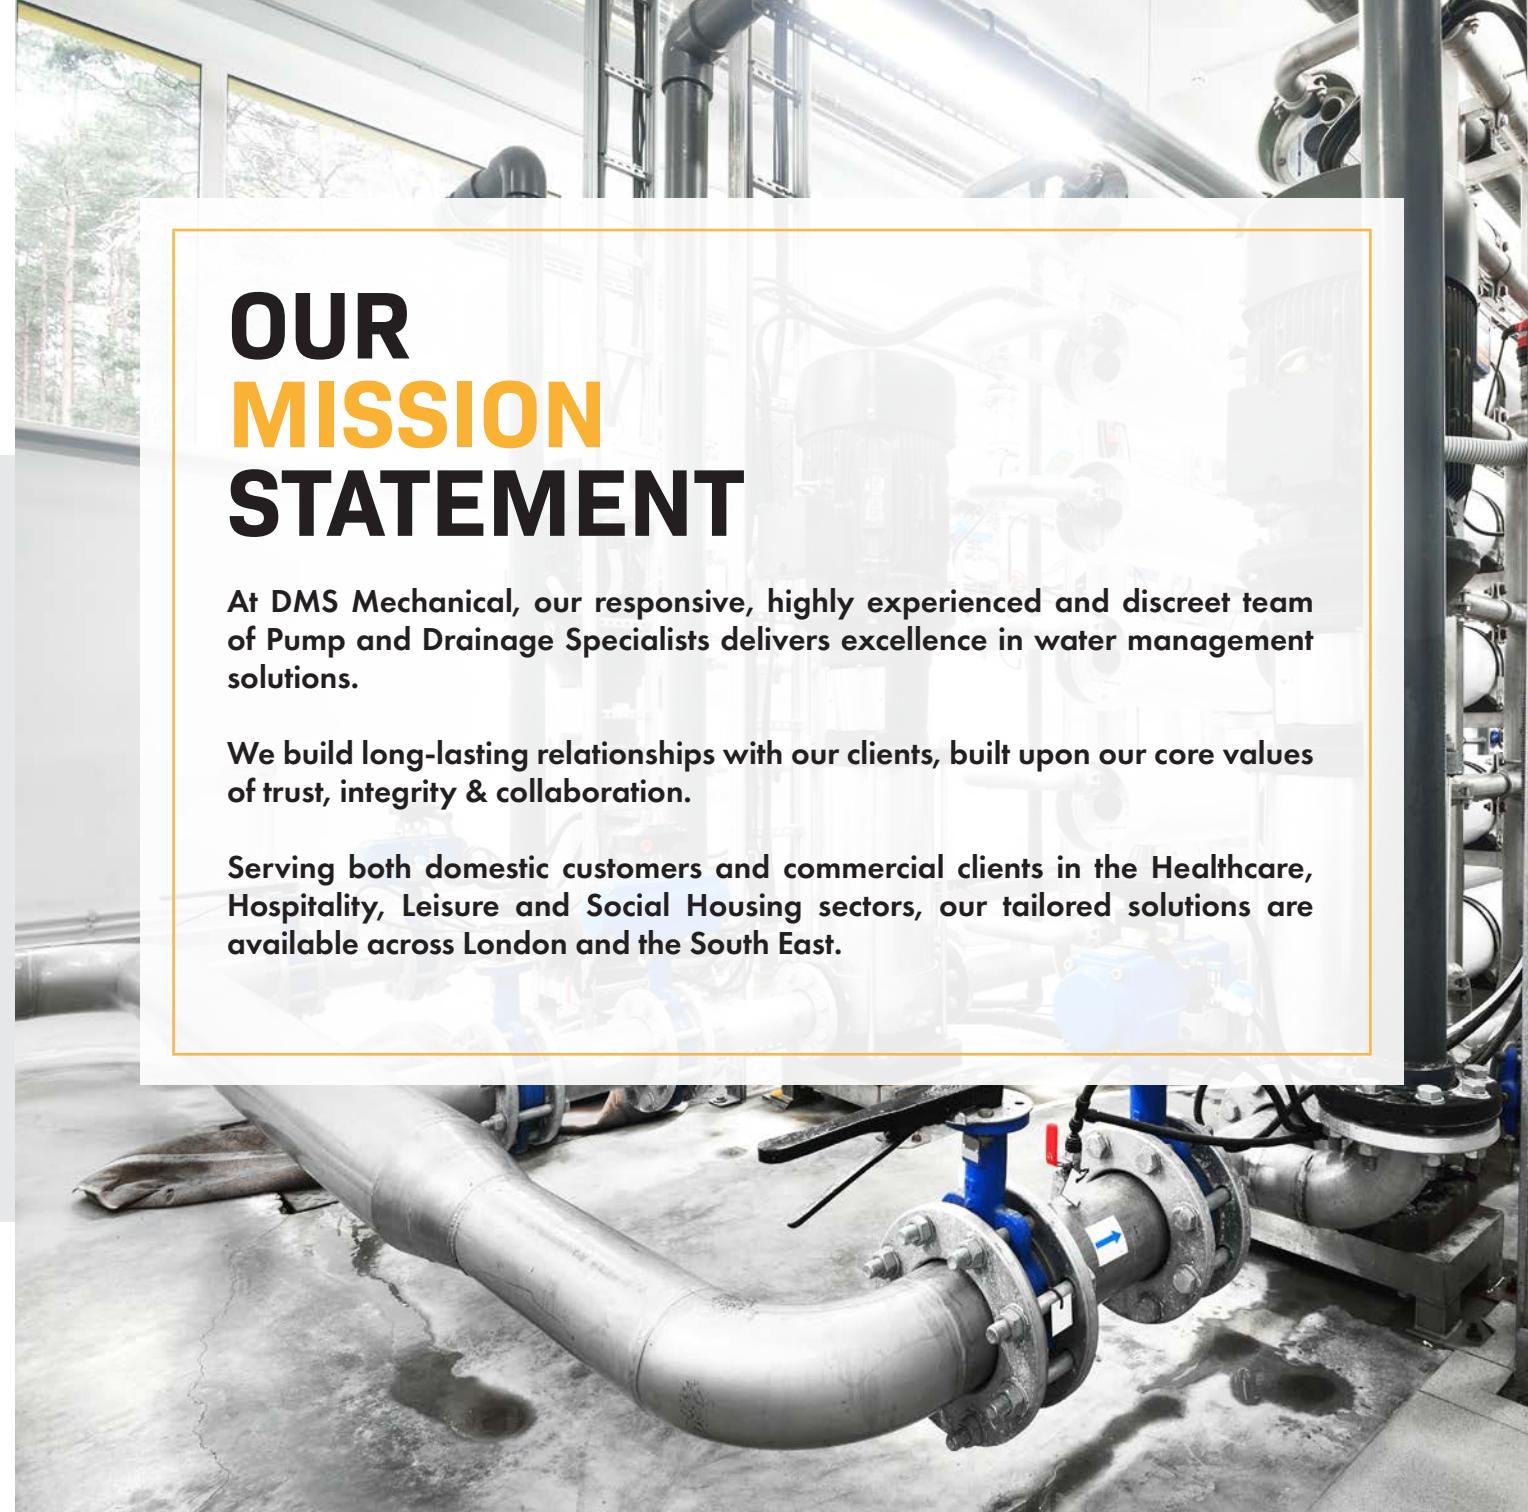

OUR MISSION STATEMENT

At DMS Mechanical, our responsive, highly experienced and discreet team of Pump and Drainage Specialists delivers excellence in water management solutions.

We build long-lasting relationships with our clients, built upon our core values of trust, integrity & collaboration.

Serving both domestic customers and commercial clients in the Healthcare, Hospitality, Leisure and Social Housing sectors, our tailored solutions are available across London and the South East.

DRAINAGE SERVICES

We offer a range of drainage services to both commercial and domestic clients, emergency drainage repair & servicing, scheduled maintenance and a design and build service for larger civil projects. Whatever the size your drainage project, our experienced engineers will be happy to offer assistance and advice.

Reactive drainage

For all drainage emergencies, we have a team of qualified drainage engineers based around London and the South East. Our emergency team aims to be on site within 2 hours to rapidly solve your problem and we also have an excellent network of out of hours engineers available.

Scheduled maintenance

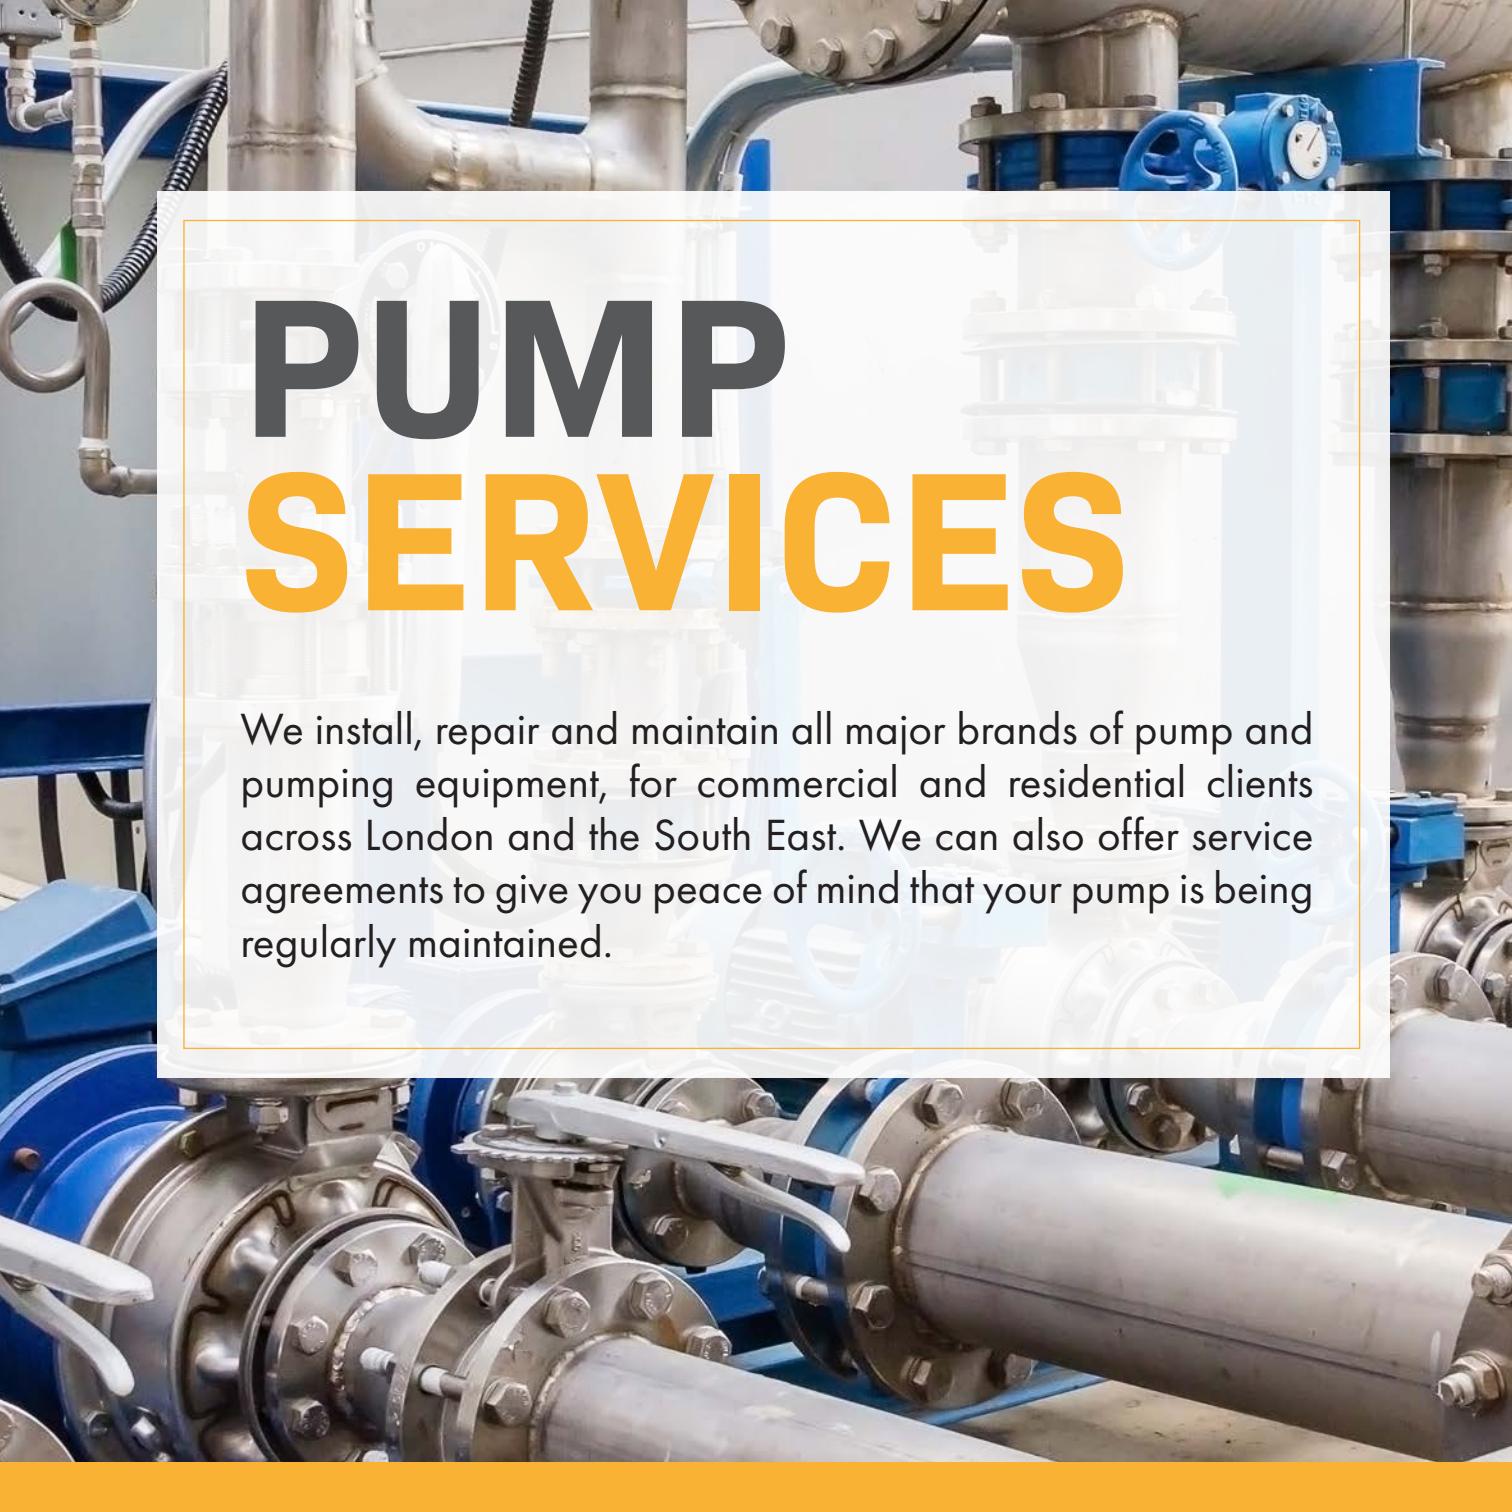

We offer maintenance agreements to schedule regular servicing and maintenance of all types of drainage system for any of our clients assets across London and the South East.

Regular servicing can help to reduce the risk of grease/scale build up, and remove root ingress or other obstacles, which can help prevent drains becoming blocked, and avoid the need for costly future repairs.

Drainage projects

We can undertake commercial drainage projects up to a value of £10M. We can assist in the design and installation of suitable foul or surface drainage systems and pump pits/pumping stations that will meet the requirements of your project.

Our projects include Sustainable Urban Drainage Systems (SUDS), soak aways, catch pits and land drains. Our drainage experts can recommend and install systems from the simple to the complex, utilising years of experience designing drainage solutions for residential, building services and facilities management.

A detailed view of industrial machinery, featuring a complex network of stainless steel pipes, valves, and pumps. The equipment is mounted on a blue metal frame. In the foreground, a large horizontal pipe is connected to a vertical pipe, with several flanges and bolts visible. The background shows more of the industrial structure, including a blue valve handle and various pipes. The overall scene is brightly lit, suggesting an outdoor or well-lit indoor industrial environment.

PUMP SERVICES

We install, repair and maintain all major brands of pump and pumping equipment, for commercial and residential clients across London and the South East. We can also offer service agreements to give you peace of mind that your pump is being regularly maintained.

Pump maintenance

Regular servicing is critical to extending the life of your pump. Taking out one of our service agreements will help to protect against expensive repairs and unexpected call out charges. It can even help to lower your energy bills since a well-maintained pump can significantly improve energy consumption.

Commercial - Pump Station Service, Monitoring & Control Equipment Service

Domestic Pump Servicing - Sump Pump, Booster Pump & Puddle Pump Service

We can provide complete pre-planned maintenance agreements for any kind of pumping system, to keep your pump in good condition and prevent unexpected failure.

Pump repairs

Whether you have planned a repair, or need an emergency engineer, our responsive team of experts will be with you promptly, to restore your pump or control equipment to good working order, anywhere in London and the South East.

Pump installation

We will guide you through the process of selecting the most appropriate pump for your needs. We provide expert installation and our experienced engineers will install your new equipment and get it up and running with minimal downtime for your business.

Once installed we'll commission your new pump and ensure it is fully ready for service. We'll perform a precise alignment to improve seal & bearing longevity, reduce vibrations, and optimise overall pump performance.

Preplanned Maintenance Agreements

Regular scheduled maintenance is the best way to spot potential issues and keep your pump in top class condition and reduce the risk of expensive pump failure.

A Pre-Planned Preventative Maintenance (PPM) agreement can help you spread out service costs and also reduce unexpected costs from faults and repairs. During regular scheduled maintenance our engineers are more likely to spot a potential issue and can repair your pumps before failure occurs.

Contact DMS Mechanical today to find out more about our competitively priced PPM agreements and ensure your pump is always working well and at its full capacity.

HARD FM SERVICES

DMS Mechanical can offer full support on all Hard FM services including mechanical and electrical (M&E).

LIFT PIT MAINTENANCE

DMS Mechanical offer lift pit cleaning and maintenance services across London and the South East. We can undertake this as either a one-off clean or as a regular scheduled maintenance service.

All DMS Mechanical engineers are EOR/202 qualified, which means they can isolate and reinstate the lift, before and after the works have been undertaken, eradicating the need for any additional lift engineers to be on site.

Over time debris and detritus can accumulate in lift pits, causing potential performance issues and making them unsanitary. Our engineers can undertake the following:

- Removal of contaminated water
- Removal of all dirt, grime and debris
- Sanitisation to eradicate bacteria
- Using industrial absorbents to dry out damp
- Installation of Sump pumps
